

## Dr. Tanvi Rajendra Pande (MPT – Physiotherapy)

Founder | Rehabilitation Aids & Surgical Footwear Specialist

Dr. Tanvi Rajendra Pande, a dedicated physiotherapist with a Master's degree in Physiotherapy (2020), is the founder of *Ms. Shri Sai Physiotherapy & Rehabilitation Surgical Footwear Manufacturing*. Coming from a family deeply rooted in orthotics and prosthetics—her father and grandfather having served at the renowned Artificial Limb Centre in Pune and managed a retail business in the same field—Dr. Tanvi was inspired from an early age to contribute meaningfully to the rehabilitation sector. Building on this legacy, she has established a unique venture that blends clinical physiotherapy with the manufacturing of specialized, customized rehabilitation aids. Her product offerings include orthotic and prosthetic devices tailored for differently-abled individuals, surgical footwear for diabetic foot care, heel and foot pain, and leprosy

patients (including mandated MCR footwear), as well as splints and aids crafted using accurate limb measurements to suit individual needs. The clinic also produces posture-correcting customized footwear aimed at maintaining bony alignment and preventing complications arising from poor foot biomechanics. With a vision to expand her reach across India, especially in rural and underserved regions, Dr. Tanvi is committed to making quality rehabilitation aids and orthopedic footwear accessible and affordable to all. The business currently operates with 12 employees, has an annual turnover of ₹56 lakhs, and has been supported by a term loan of ₹10 lakhs from Bajaj Auto. Under the mentorship of Dr. Soham Pandya, an NOG professional, Dr. Tanvi continues to scale her business with a focus on innovation, accessibility, and compassionate care. Her enterprise stands at the intersection of healthcare and manufacturing, aiming to transform the lives of patients through high-quality, customized rehabilitation solutions.

Turnover:	Rs. 56 Lakhs
No. Of Employment:	12
Mentor:	Dr. Soham Pandya
Mentor Occupation:	NOG Professional

## **Dr. Tanvi Pande**

Surgical footwear refers to specialized shoes or boots designed to support foot and ankle recovery following surgery or injury. They feature rigid or semi-rigid soles, non-slip outsoles, adjustable straps, and roomy toe boxes to accommodate dressings and swelling—ensuring protection, stability, and comfort during post-operative ambulation. These medical-grade shoes help redistribute weight away from sensitive areas, minimizing pain and promoting healing, while also allowing controlled mobility under physician guidance. Ideal options include post-op boots, heel-wedge or forefoot offloading designs, fracture boots, and diabetic/offloading shoes, typically recommended by surgeons or podiatrists for proper recovery alignment and wound protection.
