

## Oscar Dental – Restoring Smiles, Sustainably

Mrs. Y Jenifer

Oscar Dental is a leading manufacturer and supplier of artificial teeth and tooth caps, committed to quality, sustainability, and oral health awareness. Using eco-friendly materials and a non-polluting production process, the ISO-certified organization combines 60% machine precision with 40% manual customization. This blend ensures high-quality dental solutions tailored to match the natural appearance of teeth.

What sets Oscar Dental apart is its technician expertise in accurately color-matching implants to natural teeth—giving them an edge over other local manufacturers. While priced above local alternatives, their products rival multinational brands

in quality, yet remain accessible to economically weaker sections, ensuring affordability without compromising on standards with a strong emphasis on preventive dental care—especially addressing gum and bone loss in women—Oscar Dental promotes the restoration of natural teeth and recommends implants only when absolutely necessary. Oscar Dental stands for responsible innovation, compassionate care, and sustainable dental solutions.

Email ID	rajajenifer.3@gmail.com
Website	
Turnover:	Rs. 5.74 lacs
Employment:	28
Mentor:	Haribaskar
Mentor Occupation:	Management Consultant

## Artificial Teeth

Artificial teeth, also known as dentures, dental prosthetics, or false teeth, are replacements for missing natural teeth. They can be made from materials like acrylic, metal, porcelain, or composite resins and are designed to restore functionality and aesthetics. There are several types, including complete dentures (for full tooth loss), partial dentures (for a few missing teeth), dental bridges, and implants (permanent solutions fixed into the jawbone). Artificial teeth help improve chewing, speech, facial appearance, and overall oral health, and they are widely used in both cosmetic and restorative dentistry.
